

## Senior React Developer

### Position Description:

We are currently seeking a senior React Developer to join our corporate software development team. The qualified candidate must have working knowledge of software development and software engineering practices in a professional environment.

### Responsibilities:

You will be responsible for designing, planning, and implementing software development, including team lead and technical delivery activities. The key focus will be execution of implementation, deployment, and support, with a consultative approach aimed at promoting modern development practices. You will be working with and supporting a distributed team of technical resources with a range of experience from entry-level developers to highly experienced architects. The scope of work is extensive, and all candidates must have a broad range of Microsoft functional and technical capabilities. Primary duties include:

- Code, modify and debug web-based applications with React JS using additional technologies Angular 5, Flutter, TypeScript/JavaScript and Bootstrap styling
- Build and manage Application Life cycle Management elements including build/release pipeline, CI/CD, test automation, etc.
- Work with Quality Analysts to ensure changes are thoroughly tested before release. Write unit and integration tests for new code. Assist with the diagnosis of problematic applications and system testing.
- Perform code review of team members and release management using GitHub and Visual Studio Online
- Provide guidance and cultivate internal IP on application architecture design for security, performance, and cloud deployment
- Communicating project status and timelines to business stakeholders and IT management
- Provide pre-sales technical support and product demos/deep dives for customers
- Provide mentorship and internal support to a peer group of consultants and software developers
- Work with and write semantic HTML tags.
- Work with and write CSS selectors and Implement a CSS reset.
- Understand the box model and how to reset to border-box, Understand flexbox.
- Work with and implement responsive web principles including the proper user of media queries.

### Education:

UG / PG – Computer Engineering / Degree in Computers Science or any related specialization.

## Required Skills and Experience:

- Minimum of 5-7 years of applications development experience in the areas of:
  - Experience with Flutter, React / React JS
  - Web UI Development (JavaScript / Typescript / HTML5 / CSS / Bootstrap)
  - Web component framework experience with Angular or AngularJS
  - Web Service / API application integration experience (REST APIs)
  - Experience with MS SQL Server / MySQL
  - Experience with modern source code control system such as GitHub or VSTS
  - Proven ability to work in a structured, quality environment with a heavy emphasis on proper change management
  - Strong team player; able to work independently and well with others

## Desired Skills and Experience:

- Experience with infrastructure fundamentals, including networking, security, identity management, etc.
- Formal design skills (e.g. UML)
- Experience in an Agile methodology environment
- Experience in a SDLC environment
- Experience architecting cloud applications and leveraging Microsoft cloud platform services.

*Priority given to candidates with demonstrable projects, solutions, or implemented architecture patterns to share*

**Continuous learning mindset – We are seeking people that think differently and are biased toward action to accomplish great things.**

- Expert level of Microsoft enterprise software product offerings
- Strong Communication Skills (including technical writing)
- Excellent demonstrated customer service skills

**Location: Sri Lanka, India**
